Tecticornia, Salicornioideae, Amaranthaceae

# Tecticornia Arbuscula

Edited by Mariam Chandra Gitta

*Tecticornia arbuscula* (Shrubby Glasswort) is a species of plant in the family Amaranthaceae, native to Australia. It grows to 2 metres in height, with a spreading habit. It has succulent swollen branchlets with small leaf lobes. The species occurs on shorelines in coastal or estuarine areas or in salt marshes, especially marshes subject to occasional inundation by the ocean. It has a patchy distribution across south coastal Australia, occurring in southern Western Australia, South Australia, Victoria, New South Wales and Tasmania.
